INTRODUCTION

The data presented here are based on the results of the provincewide *Relance Survey of College Graduates – Technical Training*, conducted annually by the Ministère de l'Education (MELS).

The purpose of this survey is to provide an accurate picture of the situation of graduates from college-level technical training programs approximately 10 months after they have earned a Diploma of College Studies (DCS). It meets a need for accurate, relevant information on how well recent graduates are faring on the labour market, just as the other two *Relance* surveys do in the case of graduates from university and secondary school vocational training programs.

For further information on the programs covered in this brochure or on related matters, please refer to the other Relance survey documents available on the Ministère's Web site at <**http://www.mels.gouv.qc.ca/Relance/Relance.htm**>.

HIGHLIGHTS

The **highlights** (as of March 31) are mainly taken from the tables of overall results in the *Relance* brochures. They are as follows:

- The employment rate, calculated ten months after graduates obtained their Diploma of College Studies (DCS) in a technical training program, has dropped gradually since 2000, going from 74.1% to 67.6% in 2004. The percentage of graduates studying has increased from 19.6% in 2000 to 26.1% in 2004.
- The unemployment rate among DCS graduates from a technical training program was 6.0% in 2004. This rate has remained stable in recent years, varying between 5.4% and 6.0% since 2000. Moreover, it is well below the March 2004 unemployment rate of 9.3% for the active population of Québec as a whole.
- Among the graduates who were employed, 85.2% were working full-time (30 hours or more per week). Since 2000, this proportion has remained above 85.0%.
- Among the graduates working full-time, 80.9% considered their job to be related to their field of study. This percentage has decreased significantly since 2000, from 85.3% to 80.9%.
- Overall, the pay level of DCS graduates from a technical training program holding a full-time, salaried job is rising. From 2000 to 2004, the average gross weekly salary has risen from $496 to $547, although the average gross weekly salary for women remains below that for men. However, over the same period, the salary gap between men and women has gradually narrowed.

GLOSSARY OF THE MAIN TERMS USED IN THE TABLES

TARGET GRADUATES

"Target graduates" refers to all holders of a Diploma of College Studies (DCS) who graduated from a technical training program during the academic year preceding the survey year.

EMPLOYED

"Employed" refers to target graduates who stated they were self-employed or working for an employer, and not studying full-time.

SEEKING EMPLOYMENT

"Seeking employment" refers to target graduates who stated they were actively looking for a job and were neither studying nor working.

STUDYING

"Studying" refers to target graduates who stated they were either studying full-time or part-time, and not working.

INACTIVE

"Inactive" refers to target graduates who stated they were not employed, were not seeking employment, and were not studying.

WORKING FULL-TIME

"Working full-time" refers to graduates working full-time, i.e. generally 30 hours or more per week.

WORKING PART-TIME

"Working part-time" refers to graduates working part-time, i.e. generally less than 30 hours per week. The proportion of graduates working part-time is obtained by subtracting the proportion of graduates working full-time from 100%.

AVERAGE GROSS WEEKLY SALARY

"Average gross weekly salary" represents the average gross income earned by workers for one week of full-time work. The data reflect only graduates working for an employer.

WORKING IN RELATED FIELD

"Working in related field" refers to graduates working full-time who consider their job to be connected to their field of study.

UNEMPLOYMENT RATE (UNEMPLOYED)

"Unemployment rate (unemployed)" refers to the number of graduates seeking employment compared with the number of people in the labour force (which includes people who are employed and people who are seeking employment).

HOW INDICATORS ARE CALCULATED

The calculation table below uses data from the 2004 survey of College Graduates – Survey of Training to illustrate the application of the definitions of the main terms used in the tables.

Calculation example: Results of the 2004 survey of graduates with a DCS

	Number	%	Calculation
Number of graduates targeted by the survey (as of the calculation)	13 760		
Total number of graduates who completed the questionnaire	12 381	100.0	
Employed	8 365	67.6	8 365 / 12 381
• full-time	7 125	85.2	7 125 / 8 365
– in related field	5 764	80.9	5 764 / 7 125
Seeking employment	532	4.3	532 / 12 381
Studying	3 226	26.1	3 226 / 12 381
Inactive	258	2.1	258 / 12 381
Unemployment rate		6.0	532 / (8 365 + 532)

NOTES

1. Given the confidential nature of the data and a concern for maintaining the anonymity of the respondents, results for programs for which the number of graduates is less than five are not presented here. A list of these programs can be consulted in the survey report.
2. In cases where the response rate does not meet publication requirements, the results are not presented. A list of these programs can be consulted in the analysis document.
3. Because of the small number of graduates in certain programs, results in such cases should be interpreted with caution.
4. The programs have been classified according to their most recent codes. However, the results take into consideration data pertaining to the corresponding earlier programs.
5. The abbreviation "n.a." indicates that the data are not available.
6. An "x" indicates that the data must remain confidential.
7. In this sector, the percentage of employed graduates increased significantly between March 31, 2004 and June 1, 2004. Graduates included in the "studying" category on March 31, 2004 are not taken into consideration.
